

**RATE SCHEDULE “S L”  
RED LAKE ELECTRIC COOPERATIVE, INC.**

**Effective Date.** This rate is effective for electric service provided after [January 1, 2024](#).

**Schedule SL.** Security Lighting Service.

The Cooperative will lease security lighting to Consumers on a monthly basis. The lease fee will include the cost of electricity consumed (except in options as noted below), by the security light, and maintenance of the light. No allowance for down time will be given the member if their light is not working and it is not reported.

The Cooperative will install security lights on the existing transformer pole or meter pole. Installation of a security light at a location other than the existing meter or transformer pole will require additional payment from the Consumer.

Disconnection and removal of a security light at the members’ request will be at no charge. If a Consumer again requests a security light after it has been previously removed at their request, they must pay for the cost of removal and construction. This will be estimated and must be paid in advance by the member. The reconnection charge for a security light will be the same as for a meter reconnection charge.

Option I – Lease Fee      \$9.00 per month

This option covers 100-watt high pressure sodium lights and 54-watt or less LED lighting

Option II – Lease Fee      \$12.00 per month

This option covers 175-watt and 400-watt mercury vapor lights.

Option III – Lease Fee      \$8.00 per month

This option covers standard LED lighting connected on the Members side of the meter (metered energy use).

If a customer requests his/her security light to be changed to the other type, the current service charge fee will be billed.
